

ViCloud VMT Flat

PUBLIC SPACES / WORKSPACES

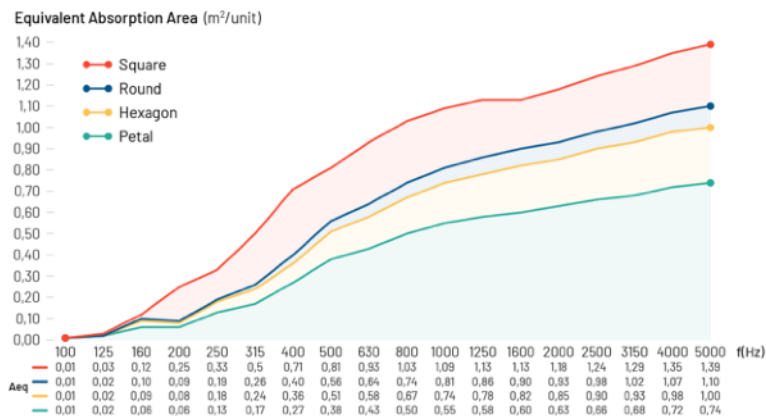

Description

ViCloud VMT Flat is a simple and light weight, suspended acoustic solution ideal for restaurants, open plan offices, convention centers, atriums, or any public space where there is a great concentration of people and where background noise, created by conversations, can quickly build up. Being a suspended acoustic element, it presents twice the area of absorption material than a common acoustic panel, making it a very effective solution for high ceilings venues. The minimum installation height of the clouds is 250mm and the maximum is 1180mm. In addition, by using Vicoustic Virtual Material Technology, ViCloud VMT Flat is customizable and adaptable to meet your architectural needs.

Features

- Light weight
- Easy to Install
- Easy to clean and maintain
- High Performance in medium and high frequencies
